

MAYTRICS

ARE YOU LOOKING FOR AN ELECTRICIAN TO CARRY OUT WORK IN YOUR HOME?

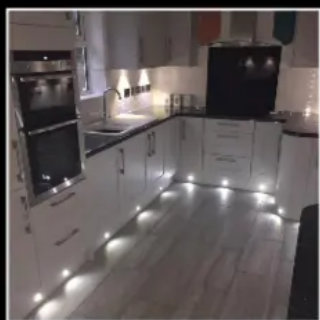

ARE YOU WORRIED THAT YOUR ELECTRICS ARE OLD, UNSAFE OR NEED UPGRADING?

HERE AT MAYTRICS, WE OFFER A FRIENDLY, RELIABLE SERVICE COVERING ALL DOMESTIC ELECTRICAL WORK NO MATTER HOW BIG OR SMALL THE JOB IS.

COVERING ALL AREAS FROM SOUTH COAST TO LONDON OUTSKIRTS

- Fuse Board Upgrades
- Earth Bonding
- Full / Partial Rewires
- Kitchen / Bathroom Electrics
- Garden Electrics / Outside Lighting
- Electrical Alterations
- Garage / Outbuilding Electrics
- Loft Electrics
- Smoke Alarms
- Downlights
- PAT Testing
- Testing, Inspecting, Condition Reports & Certification

HOW WELL DO YOU KNOW YOUR CONSUMER UNIT?

Did you know that your property should have a surge protector?

Unexpected power surges can be damaging to your electrical system. They can damage your fuses or circuits. Lightning strikes and power outages can cause these unexpected power surges. A whole home surge protector is able to absorb this initial volt of electricity, preventing damage to your home or building's electrical system.

Did you know your circuits should be protected by an RCBO 'Residual Current Breaker with Over-Current'?

This is a switch included with more modern fuse boards to improve the safety of your property and protect you from the risk of electric shocks. For example without an RCBO DIY accidents such as drilling through a cable when mounting a picture hook or cutting through a cable with the lawn mower will result in an electric shock. An RCBO will also protect your circuit from overload which can occur when too many devices are in use and short circuiting which can be considerably more dangerous and may occur as a result of wire damage.

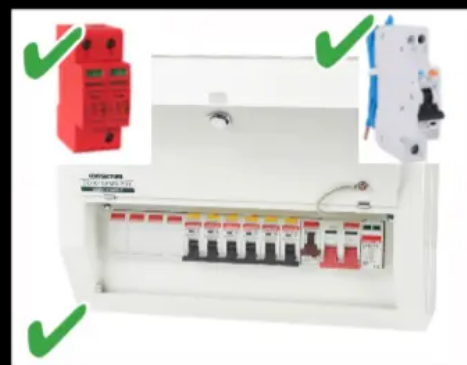

Has your fuse board been inspected recently?

Your fuse board/ consumer unit should be inspected/ tested periodically. Tenanted properties should have theirs inspected every 5 years or at each change of occupancy and owner occupied properties should be checked at least every 10 years.

Do you understand the importance of Earth bonding?

Earth bonding is used to protect you from an electric shock. It also causes the protective device (either a circuit-breaker or fuse) to switch off the electric current to the circuit that has the fault. Earth bonding is the act of connecting all metallic objects in a room, or house, to 'electrical earth'; usually a gas and/or water pipe. For example, without the earth connection, the metal outer casing of a washing machine could become 'live'.

5 REASONS TO UPGRADE YOUR CONSUMER UNIT

- 1 COMPLY WITH ELECTRICAL WIRING REGULATIONS**
Many homes around the country contain consumer units that are not compliant with current electrical regulations. Having a new fuse board installed will ensure that you adhere to electrical wiring regulation requirements.
- 2 IMPROVE YOUR PROPERTY'S SAFETY STANDARDS**
Non compliant consumer units jeopardise the electrical safety of your property. By upgrading your fuse board, occupants will benefit from increased safety standards.
- 3 EASE YOUR OWN PEACE OF MIND**
In complying with electrical regulations and improving the safety standards of your property, you'll ease your conscience and benefit from better peace of mind - safe in the knowledge that things are working as they should. Ensuring your electrical system is running efficiently and safely.
- 4 INCREASE YOUR HOMES ENERGY EFFICIENCY**
When you replace your consumer unit, you'll also increase the energy efficiency of your property. Not only do high performing electrical appliances benefit the environment, but they also save money on utility bills.
- 5 ENJOY REASONABLE, HONEST TRADESMEN FEES**
If you're worried that upgrading your consumer unit will cost the earth, don't panic! MAYTRICS is here to help. We can supply and install a replacement consumer unit including testing, certification and notifying local building authorities of the works completed for highly competitive prices.
